

Method 1

Data/Objective Optimization

External

Internal

Normative

- subject binding
- preference alignment
- structured supervision
- safety alignment

Method 3

Trajectory-Time Optimization

External

Normative

- attention guidance
- layout correction
- semantic repair
- safety steering

Method 5

Post-hoc Optimization

External

Normative

- reranking
- safety filtering
- OA verification
- plausibility checking

Conditions $\mathcal{C}$

Condition Encoder

encoder
or
controlnoisy latent
 X_T

Denoising Process

Filtering

- verifier
- scorer
- filter

Final Outputs

single image

grouped set
multi-view setshort video
or story

Method 2

Condition-Path Optimization

External

- prompt grounding
- conditioning
- multi-condition fusion
- structural control
- reference

Method 4

Cross-Instance Optimization

Internal

- identity persistence
- temporal coherence
- multi-view compatibility
- narrative continuity

External consistency

Internal consistency

Normative consistency
